SUMMARY

Aspiring Game Designer and Computer Science student actively learning C++ programming to build a strong technical foundation. Broadening comprehensive understanding of the game development pipeline by taking on various roles, including production and engine development. Striving to develop a keen eye for the overall code architecture and learning practical design considerations through hands-on technical challenges.

EDUCATION

Keimyung University | Daegu, South Korea

B.S. in Computer Science | GPA: 3.2/4.5

Expected May 2027

Relevant Courses: Real-Time Interactive Simulation, Computer Graphics Mathematics, Advanced C++, Data Structures (CS200, CS225, CS230, CS250).

WHAT I AM LEARNING

- **C++ & Concurrency:** Exploring advanced features of modern C++, focusing on memory management, move semantics, and the Rule of 5/0. Actively studying concurrent programming and thread-safe data sharing mechanisms.
- **Graphics & Rendering:** Studying rendering pipelines, view/projection matrices, and geometric transformations. Applying concepts using OpenGL to build custom batch and instanced renderers for efficient 2D/3D scene rendering.
- **Game Engine Architecture:** Learning core principles of low-level game engine architecture, porting engine components, developing collision routing systems, and designing Finite State Machines (FSM) for scalable game logic.

WORK EXPERIENCE

Team Project | Engine Developer

Daegu, South Korea

Oct 2025 – Present

- Managed general engine porting processes and engineered a custom rendering system utilizing OpenGL.
- Implemented batch and instanced renderers optimized for visually cohesive scenes with high sprite counts, improving overall rendering performance.

MagnetDude | Producer

Daegu, South Korea

Mar 2025 – Jun 2025

- Led the project by managing schedules to synchronize code, art, and sound development.
- Handled overall timeline management, synthesized team opinions, and reported on progress.
- Resolved conflicts with non-participating members through active communication and gathering team consensus, gaining valuable leadership experience.

PROJECTS

CS230 2D Action Game | Game Programmer

Oct 2025 – Dec 2025

- Collaborated to develop and implement robust Finite State Machines (FSM) for enemy AI behaviors (patrol, melee, ranged) in a 2D Action Platformer.
- Orchestrated scene management, player updates, collision routing, and designed randomized map progression mechanics across 3 distinct map phases.

Explore C++ Concurrency | Presenter & Developer

Nov 2025

- Designed a functional demo program based on modern C++ Concurrency topics.
- Showcased thread management and data sharing mechanisms to ensure concurrent safety, presenting the underlying architecture and solutions to peers.
